

Secure Hand Strap

Reliable illumination is a tactical asset during confrontations. It can identify a threat. Distinguish an ally. Illuminate an assailant. It can be used to distract, disorient or disable.

However, controlling your light during a confrontation can be problematic. The patented Secure Hand Strap solves this problem. It locks a high intensity performance light in the reaction hand of an officer. The hand can be opened or closed. It can be used to check, redirect or cover. The Secure Hand Strap allows an officer to reload a firearm while keeping a light in hand.

Hand straps attach to ASP Tungsten, Triad, Turbo and Pro Series lights. Their polymer attachment ring encircles the rear switch groove of ASP illumination tools. Straps are small, lightweight and adjustable. An elastic loop encircles the light bezel. A Velcro® strap is adjusted over the back of the hand. It locks the light in the palm.

Lightweight, rugged and practical. The Secure Hand Strap from ASP.

- Compact
- Adjustable
- Rapidly Attached
- Locks the Light in the Palm
- Compatible With All Polymer Clip Lights
